Scope of Work

This report was developed for the Virginia Bureau of Insurance. It summarizes statistical information related to Life and Annuities, Health, Life and Annuities & Health, Property & Casualty, Personal Lines, and Title insurance examinations administered in Virginia by Pearson VUE between May 1, 2017, and April 30, 2018.

A Public Adjuster examination was also administered in Virginia by Pearson VUE between May 1, 2017, and April 30, 2018. The samples for this examination were very small. Because statistical information based on small sample sizes can be highly unreliable, the results for the Public Adjuster examination will not be reported.

Executive Summary

Appendices A through E provide demographic survey results (broken down by exam level) for all candidates. Although candidates are not required to respond to the demographic questions, more than 99% of them chose to do so. Pearson VUE strongly recommends against interpreting statistics when candidate volumes are low—typically fewer than 50 candidates.

Background

On July 1, 2008, Pearson VUE added a questionnaire to the Virginia Insurance Licensing examination. The questionnaire allowed Pearson VUE to collect information about the gender, ethnicity, education, English-language ability, native language, and age of candidates, and whether the candidate had completed a licensing exam preparatory course. At the request of the client, Pearson VUE psychometricians used this information to calculate pass rates, means and standard deviations of scaled scores, mean item proportion answered correctly (*p* values), and mean point-biserial correlations (*pBis*) for candidates in each demographic category.

The Virginia Insurance Life and Annuities, Health, Life and Annuities & Health, Property & Casualty, and Personal Lines exams consist of two parts: a general-knowledge portion and a state-specific portion. The passing standards for the state-level Life and Annuities, Health, Life and Annuities & Health, and Property & Casualty examinations were reviewed and modified by a committee of subject matter experts in July 2010. The new passing standards went into effect in November 2010.

Beginning May 2015, a linear-on-the-fly testing (LOFT) design has been in use to deliver the Virginia Insurance examinations. In a LOFT exam, each candidate receives a different test form consisting of items selected from a carefully sculpted item pool. Each form is constructed to meet specific content and statistical constraints so all forms meet the same content specifications and are highly comparable in difficulty. The general-knowledge portion and the state-specific portion are scored together as a single examination under the new LOFT delivery design. The combined score from the general-knowledge and the state-specific portions is evaluated to determine the candidate's pass/fail status, while as before the two exam portions were scored separately. **Caution should be taken when comparing the pass rates referred to in this report and those referred to in historical reports given the new scoring scheme of the examination and the implementation of the new passing standards for the state portions.**

Conclusions

Mean p values and point-biserial correlations are calculated for each item based on responses from candidates who were administered the item. For a given demographic category, item overlap across candidates results in a range of candidate observations across items (i.e., minimum and maximum count). When evaluating statistics by demographic categories, some sample sizes can be small and should be interpreted with caution. Additionally, mean point-biserial correlations are only reported when the minimum number of candidates per item is greater than 1. Pearson VUE cautions against interpreting differences in mean scores without evaluating the statistical significance of those differences.
